The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, colourers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques control or control or generating antibodies against it, detecting or quantificating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations of companion and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human DNA and and confidence other types of data and products dependent on DNA and and annother sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2611
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            681

polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymocleotides are also used in disponsitics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II): (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymocleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CGCGCGATCCGGAGTTGGCGAAGTGGATTGAGGAAAACGCGACCTTCCCGAACGGAATGG 1218

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a positive selection system that involves conferring to transferred cells the ability to metabolise arabitol, ribition and/or mannitol. The positive selection method is used in positively selecting transgenic cells from a population of cells Using the positive selection method, the presence of the gene of interest in the genetically transformed cells may be determined without the disadvantages associated with traditional negative selection of the transformed cells is achieved without directly damaging the neighbouring non-transformed cells is achieved without transformed cells may be identified by simple visual means without the use of a separate assay to determine the presence of a marker gene. This technique also avoids the release of antibiotics or other dangerous genes into the environment. The present sequence is Escherichia coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Positively selecting transformed cells comprising selectable marker gene and desired gene, from a cell population by using marker compounds e.g., arabitol, ribitol which confer selective advantage on transformed cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     622 IGCATTTCGGTGTAGGTAACTTTTTCGAGCCCATGAGGCGTTCTACGTCGAGCAGTTC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTS care used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of genes from FF cells allows the production of polanes from FF cells allows the production potential of the microorganisms to be improved. New genes may be discovered, possible functions of unknown open reading frames can be dentified and gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore control of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore confined to microarrays based on function of the gene products to facilitate microarrays based on function of the gene products to facilitate analysis of the results. AAF11248 to AAF11247 represents ESTS from Aspergillus or AAF14879 to AAF1887 represents ESTS from Aspergillus or AAF14879 to AAF1887 represents ESTS from Aspergillus or all specifically claimed in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1160 GCGCGATCCGGAGTTGGCGAAGTGGATTGAGGAAAACGCGACCTTCCCGAACGGAATGGT 1219

The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FP cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes conditions of use fluorest conditions of the same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production contential of the microorganisms to be improved. New genes may be contential of the microorganisms to be improved. New genes may be consisted undersome copy number variation and stability can be consisted to changes in culture conditions, environmental stress, spore monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore componensis, recombination, metabolic or catabolic pathway concernays based on function of the used and organisation of the range conditions of undersome consisting elimination of redundancy as one spot on an array equals one gene or open reading frame, and organisation of the malysis of the results. AAF07478 to AAF11248 to AAF11248 to AAF11248 to AAF11248 to AAF11247 represents ESTS from AAF14879 to AAF1537 represents ESTS from Aspergillus oryzae; and AAF14879 to AAF1537 represents ESTS from Aspergillus or and specifically claimed in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   755

                                                                                                                                                                 AAS93068;
                                                           RESULT 15
                                                                                                                                       δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated polynucleotide (I) and probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The cand gene mapping, and in combinant production of (II). The contidentifying expressed genes (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving a food supplement. (II) and its binding partners are useful in medical mapping of sites expressing (II). (I) and (II) are useful in medical inguishing of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and the anapping of all and the anapping of the involving and an analyse of data and products dependent on DNA and the anapping of all and the analyses of the propresent novel human and and analyse of the conditions and the analyse of the products dependent on DNA and the analyse of the conditions and the products dependent on DNA and the analyse of the conditions and the products dependent on DNA and the analyse of the conditions and the products dependent on DNA and the analyse of the conditions and the products dependent on DNA and the analyse of the conditions and the products dependent on DNA and the analyse of the conditions and the products dependent on DNA and the analyse of the conditions and the product of the conditions are analysed to the conditions and the product and the product of the conditions and the product of the conditions and the product of the conditions and the product of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1307 CGAGGATTTCCATCAGTGGGTGCTGGAAGACCAGTTTGCGGATGGCCGTCCGCCGTTGA 1366
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAAAGCCGGCGTGCAGATGGTCGGGGACGTGACGGACTGGGAGTACGTCAAGATCCGAAT 1426

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.

The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. A&S64197-A&S6454 represent novel human amino acid sequences. A&S64197-A&S6454 represent novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1322 GTGGGTGCTGGAAGACCAGTTTGCGGATGGCCGTCCGCCGCCTTGAAAAAGCCGGCGTGCA 1381
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CTGGGTGGAGGAAACTTCGTCGTGGGCGTCCTGCCTGGGAAGTCGCAGGTGACA 380
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 2,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1, Application US/09976059
Patent No. US20020164747A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Farnet, Chris
APPLICANT: Sazopoulos, Emmanuel
APPLICANT: Staffa, Alfredo
TITLE OF INVENTION: Genes and Proteins for Biosynthesis of Ramoplanin
FILE REPERENCE: 3019-PCT
CURRENT PILING DATE: 2001-10-15
NUMBER OF SEO ID NOS: 34
SOFTWARE: PatentIn version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1.0%; Score 40.4; DB 9; Length 536165;

This clone is from an A. gambiae BAC library (ND-TAM) provided by
This clone is from an A. gambiae BAC library (Second): CHOMINS and Sequenced by The Institute for Genomic Research
[TIGR]. The BAC library was generated from A. gambiae PEST strain
DNA. All DNA was extracted from newly hatched first instar larvae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Eukaryota; Metazoa; Arthropoda; Hexapoda; Insecta; Pterygota;
